

CyberOrion 安全分析报告

专家复盘 · 证据链 · Agent 调度 · 可执行建议

一 执行摘要

报告 Agent 已完成结构化编排：结论、证据、限制和安全建议均已纳入。

二 任务背景与范围

任务 ID	demo_attack_chain_reconstruction
任务类型	attack_chain
任务状态	success
开始时间	2026-08-24T18:58:00Z
结束时间	未记录
耗时	4.2 秒
上下文字符	927
估算上下文 Token	190
输出 Token	190

场景摘要：展示 Knowledge Agent、Network Security Analyzer、DFIR 和 Replay Attack Agent 的协作链。

统计口径：CAI terminal recording estimate。

三 知识库与威胁背景

检索状态：无直接命中

置信度：未提供

四 执行链路 with 关键证据

以下内容按实际终端记录组织。Agent 返回为空、工具失败或证据不足时，报告保留该状态，不以推测替代缺失过程。

Agent 调度摘要

- Tool: dispatch_agent {phase: initial, preferred_agent: Knowledge Agent, background: attack chain reconstruction, evidence: timeline.json|/web_access.log/auth.log}
- Agent Result: Knowledge Agent returned ATT&CK mapping guidance for Valid Accounts, Web Shell, Command and Scripting Interpreter.

- Tool: dispatch_agent {preferred_agent: Network Security Analyzer, task: correlate web_access.log and timeline events}
- Agent Result: Network Security Analyzer linked 198.51.100.24 login -> /uploads/.cache.php -> shell download.
- Tool: dispatch_agent {preferred_agent: DFIR, task: validate host evidence and separate facts from hypotheses}

关键过程与中间结果

- Tool: dispatch_agent {phase: initial, preferred_agent: Knowledge Agent, background: attack chain reconstruction, evidence: timeline.json/web_access.log/auth.log}
- Agent Result: Knowledge Agent returned ATT&CK mapping guidance for Valid Accounts, Web Shell, Command and Scripting Interpreter.
- Tool: dispatch_agent {preferred_agent: Network Security Analyzer, task: correlate web_access.log and timeline events}
- Agent Result: Network Security Analyzer linked 198.51.100.24 login -> /uploads/.cache.php -> shell download.
- Tool: dispatch_agent {preferred_agent: DFIR, task: validate host evidence and separate facts from hypotheses}
- Final Deliverable: timeline, evidence table, ATT&CK mapping, unknowns, recommendations. Report Agent compiles PDF for systematic task.

五 任务结果与安全建议

最终状态：success；进程退出码：未记录。

报告 Agent 已完成结构化编排：结论、证据、限制和安全建议均已纳入。

- 由安全人员复核报告中的证据、时间线和未决问题。
- 对未验证结论补充原始日志、流量或端点证据后再执行处置。

六 附录：终端证据节选

```
$ cyberorion attack_chain --workspace task environments/attack_chain
Reasoning summary: evidence-first reconstruction: do not fill gaps without logs.

Tool: dispatch_agent {phase: initial, preferred_agent: Knowledge Agent, background: attack chain reconstruction, evidence:
timeline.json/web_access.log/auth.log}

Agent Result: Knowledge Agent returned ATT&CK mapping guidance for Valid Accounts, Web Shell, Command and Scripting
Interpreter.

Tool: dispatch_agent {preferred_agent: Network Security Analyzer, task: correlate web_access.log and timeline events}

Agent Result: Network Security Analyzer linked 198.51.100.24 login -> /uploads/.cache.php -> shell download.

Tool: dispatch_agent {preferred_agent: DFIR, task: validate host evidence and separate facts from hypotheses}

Final Deliverable: timeline, evidence table, ATT&CK mapping, unknowns, recommendations. Report Agent compiles PDF for
systematic task.
```
